

# National Moorings Network - data currently available via the portal

Data summary - report run on Thursday 30 November 2017

<b>Headers:</b>	Name of ANMN sub-facility.
<b>Sub-headers:</b>	Moorings site name or code.
<b>Data category:</b>	Broad category for the set of parameters measured. 'Temperature' = temperature and pressure only; 'CTD timeseries' = conductivity (salinity), temperature and pressure (depth); 'Biogeochemical timeseries' = CTD plus chemical & biological parameters; 'Biogeochemical profiles' = same parameters as in 'Biogeochemical timeseries', but measured from a profiling instrument, deployed from a small boat (commonly referred to as a 'CTD cast'); 'Velocity' = current profiles; 'Wave' = wave parameters measured by some Acoustic Doppler Current Profiler (ADCP) instruments. 'CTD timeseries' and 'Biogeochemical timeseries' come from similar instruments that differ only in the inclusion of additional sensors. For some moorings, this has varied from one deployment to the next. In such cases the total time coverage of temperature and salinity is the combined coverage of these two categories.
<b># FV00:</b>	Number of non-quality controlled datasets.
<b># FV01:</b>	Number of quality controlled datasets.
<b>Start:</b>	Deployment start date (format: dd/mm/yyyy).
<b>End:</b>	Deployment end date (format: dd/mm/yyyy).
<b># days of data:</b>	Number of days between the data recording start and end dates.
<b>% coverage:</b>	Number of days with data as a percentage of the time coverage (i.e. % coverage = Data coverage (days)/Time coverage (days) x 100).
<b>National Moorings Network:</b>	<a href="http://imos.org.au/nationalmooringnetwork.html">http://imos.org.au/nationalmooringnetwork.html</a> .
