

# Argo Floats - data currently available via the portal

Data summary - report run on Friday 02 November 2018

---

# platforms:	Number of Argo floats that have been deployed.
# active platforms:	Number of Argo floats that have been transmitting data during the past month.
# oxygen platforms:	Number of Argo floats with oxygen sensors that have been deployed.
Start:	Earliest data transmission start date (format: dd/mm/yyyy).
End:	Latest data transmission date (format: dd/mm/yyyy).
# years of data (range):	Number of years between the data transmission start and end dates (minimum - maximum).
Argo:	Argo floats measure temperature and salinity from the surface to a depth of 2,000 m every ten days ( <a href="http://imos.org.au/argo.html">http://imos.org.au/argo.html</a> ). This report shows Argo floats deployed by the CSIRO and floats that went through the Australian region (i.e. longitudinal range: 20 – 180; latitudinal range: 5 – -65).
