

Wireless Sensor Network - data currently available via the portal

Data summary - report run on Tuesday 03 October 2017

# platforms:	Number of relay poles and sensor floats forming the sensor network. Relay poles typically transmit data recorded by multiple sensors mounted on sensor floats to a base station, which has a high-speed link back to the Australian mainland.
# QC'd data:	Number of sensors for which quality controlled data is transmitted.
Start:	Data recording earliest date (format: dd/mm/yyyy).
End:	Data recording latest date (format: dd/mm/yyyy).
# years of data (range):	Number of years between the data recording start and end dates (minimum - maximum).
